Dive deep in ChatGPT Prompting: Context + RGCA Formula

- For more profound interactions with ChatGPT, providing context is crucial. Context comprises a few elements:
 - Target,
 - Tone,
 - Style,
 - Length,
 - Format, and
 - Examples
- By understanding these elements, you can get detailed and personalised responses from ChatGPT.

TSL, Format & Example

- **Target:**

Identify who the target audience is. For example, in "Act as a storyteller, write a story," add who the story is for, like "for Indian 10th class students." This makes ChatGPT tailor its response for that specific audience.

- **Tone, Style, Length (TSL):**

- *Tone*: The attitude or mood of the output. Specify the desired tone, such as sarcastic, formal, humorous, critical, etc.
- *Style*: How the output should be presented. It could be formal, informal, simple, sophisticated, in the style of famous personalities, etc.
- *Length*: Define the desired length of the output. Although ChatGPT might not precisely adhere to word counts, providing a length gives a general guideline.

- **Format:**

Specify the format, like bullet points, table, or CSV file, depending on the type of output required.

- **Examples:**

Provide examples to clarify what kind of response you're looking for. This can be highly effective but is somewhat subjective.

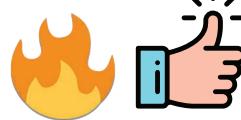

Enhancing ChatGPT Prompts with Context

- Contextual Elements for Effective Prompting: Understanding Target, Tone, Style, Length, Format, and Examples is essential for crafting prompts that yield detailed and personalised responses from ChatGPT.
- Target Audience: Knowing who the content is for helps ChatGPT tailor its responses more effectively.
- Tone and Style: These elements set the mood and presentation of the output, making the interaction more aligned with your requirements.

- Length and Format: While ChatGPT may not be precise with length, giving an approximate word count helps. Specifying the format aids in getting the output in the desired structure.
- Use of Examples: Providing examples can be a powerful way to guide ChatGPT's responses, though it requires a balance to avoid over-specification.
